DETAILED ACTION

Allowable Subject Matter

Claims 1, 3-11, and 13-20 are allowed.

The following is an examiner's statement of reasons for allowance:

Applicant's **claim 1** is drawn toward a data processor for receiving a data stream, including a plurality of packets, and playing back a content concurrently based on content data stored in the packets, each said packet having an identifier, the content data including a first code, which specifies a data location of a first portion of the content, and a second code, which specifies a data location of a second portion thereof, the data processor comprising: a dummy packet processing section, which makes a plurality of dummy packets, each having a dummy identifier that is different from any of the identifiers of the packets, and which generates a playback stream, including the dummy packets at predetermined intervals, based on the data stream received; a detecting section for detecting any of the dummy identifiers by scanning the identifiers of the respective packets of the playback stream and then outputting a first detection signal upon detecting the first code and a second detection signal upon detecting the second code, respectively; a switch, which receives the playback stream and which selectively passes the content data representing the first portion of the content in accordance with the first and second detection signals; and a decoding section for playing back the first portion of the content based on the output of the switch, wherein the dummy packet processing section generates the playback stream by inserting the

Art Unit: 2621

dummy packets into the data stream at time intervals as defined by the playback duration of a given picture.

Applicant's independent **claim 1** comprises a particular combination that is neither taught nor suggested by the prior art. The closest prior art of record, Suzuki (US Patent 7,424,203) and Morinaga et al (US Patent 7,359,620), differs from the claimed invention by failing to teach or fairly suggest wherein the dummy packet processing section generates the playback stream by inserting the dummy packets into the data stream at time intervals as defined by the playback duration of a given picture. Rather, the prior art merely discloses that the dummy pack are of a certain length, not inserted every into the stream at intervals of time defined by the playback duration of a given picture.

Applicant's independent **claim 11** is the corresponding method to the apparatus of claim 1, and is therefore found allowable in view of the explanation set forth in claim 1 above.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
